Subject: EVS Grade: 2 Week,11/Day,1 Date:04/10/2021

Aspect: Supporting content (Home assignment)

Lesson no.13

Topic: Weather and seasons

NOTE: This pdf is not to be printed.

LET'S BEGIN

Sub-topic: 1) Weather changes all the time
2) How do we feel in different
weather conditions

Weather changes all the time

Weather is a term that describes the condition of the atmosphere in term of rain, sunshine, wind and clouds.

Weather is not the same all the time. Weather changes almost every day and may even change during the course of the day. It may rain for an hour in the morning and then become sunny and clear after that. When it is sunny outside, the sun is up and the weather is warm.

Weather can be windy, rainy, cloudy or humid.

When it is cloudy, it is full of clouds that you cannot see the sun. When there is lot of wind outside, the weather is windy.

If the water vapour in air increases, weather is humid.

If there is a lot of rain, weather is rainy.

How do we feel in different weather conditions

HUMID DAY

We feel hot and we sweat a lot. Those places which are close to the sea have a humid climate.

CLOUDY DAY

Weather becomes cool, if dark clouds bring rain. We carry umbrella in a rainy day.

WINDY DAY

On a windy day, a dust flies all around. If it is a hot windy day, the weather remains same but if it is a cold windy day, the weather turns cold.

SUNNY DAY

Sunny days are hot. Noon is the hottest part of the sunny day when the sun is overhead.

Do you know: The weather conditions prevailing in an area in general or over a long period called climate.
